PROJECT SAMAD / PHASE 003 / 19 OCT 2026
CINEMATIC 3D EXPERIENCE - DEVELOPMENT REPORT

Implementation branch: project-samad/phase-03-cinematic
Base: phase 02 commit 22a5100c8259cf076fbd56804d3a41ba249829c3
Status: Development implemented; release blocked pending tests.

CHANGE SUMMARY
- Added native WebGL2 shader-driven raymarched 3D orbital sculpture.
- Mouse-driven orientation uses smoothed pointer interpolation.
- Rendering is capped near 30 FPS and limited to visible scene.
- WebGL size capped; no outside texture or institution data used.
- Reduced-motion freezes animations; CSS 3D fallback available.
- Reframed hero for business strategy and operational execution.
- Updated metadata, canonical URL and social sharing information.
- Updated the master record index.

FILES
components/experience/CinematicScene.tsx - new component
app/page.tsx - cinematic hero, content and controls
app/layout.tsx - professional SEO metadata
PROJECT_SAMAD.md - updated phase index
docs/phase-reports/PHASE-003.pdf - this report

VERIFICATION
GitHub commit creation: PASS.
Code content review: partial. No build or visual tests completed.
Build, lint, tsc, device performance: NOT RUN.
QA, security and confidentiality review: OPEN.
Production: UNCHANGED; no merge or deployment.

KNOWN RISKS
Existing repository history, assets and resume require disclosure review.
WebGL shaders remain untested on target devices and browsers.
30 FPS target is a cap, not a measured performance result.
Some legacy project components remain in repository.

ROLLBACK
Do not merge phase-03-cinematic; production stays on main.

Next: build and real browser QA, performance tuning and approval.
